

PRODUCT QUICK GUIDE

One creative workspace for turning ideas into finished work.

What is it?

An AI-powered creative workspace that brings models, project memory, media generation, editing, and production tools into one connected system.

One account. Many leading models. One continuous creative workflow.

jiucalhezi.studio

Why Jiucaihezi Studio?

AI tools are powerful—but creative work is often split across too many products, accounts, interfaces, histories, and files.

One workspace

Work with leading models from China and around the world without rebuilding your project every time.

Project memory

Keep creative knowledge searchable, structured, updateable, reusable, and traceable.

Creative Mode

Fast like chat, but with project access, Skills, MCP tools, plugins, and production structure.

From idea to output

Move from writing and prompts to image, video, audio, refinement, subtitles, and final assembly.

What can you use it for?

Write & develop	Novels, scripts, episodes, characters, worlds, and story ideas
Design & generate	Characters, scenes, props, storyboards, images, video, and audio
Organize & remember	Turn conversations, documents, and notes into reusable project knowledge
Refine & finish	Edit assets, combine media, add subtitles, and assemble a finished sequence

The simple creative workflow

You do not need to understand the underlying model stack. Start with an idea; Jiucaihezi Studio helps connect the steps.

1

Start in Creative Mode

Describe what you want to make. Use Skills to shape the idea into scripts, characters, scenes, props, storyboards, or production prompts.

2

Choose a model

Select the model that fits the task—from language and reasoning to image, video, or audio generation.

3

Generate in the Creation Panel

Create images, video, and audio inside the same project instead of copying prompts and files between separate products.

4

Refine and assemble

Use Canvas and connected tools to repair details, adjust assets, combine media, add subtitles, and complete the work.

Prompt → Generate → Refine → Assemble

The product is designed to support both professional creative workflows and simpler, scenario-based entry points for beginners. E-commerce Mode is already available, with more creative workflows planned.

How to get started

The basic workflow is simple: sign in, choose a model, choose a mode, and start creating.

1

Open the product

Visit <https://jiucaihezi.studio/> in your browser.

2

Register or sign in

Open Settings to create an account or sign in.

3

Choose a model

Use the model selector in the upper-right corner of the conversation panel.

4

Choose a mode

Chat Mode for discussion; Code Mode for programming; Creative Mode for stories, scripts, prompts, media, and creative projects.

5

Open the creative tools

Use Creation Panel for generation, Editor for project materials, and Canvas for visual refinement.

6

Download the desktop app if needed

Open Settings and choose Download App in the upper-right corner.
